

What is claimed is:

Sub B2
10043285-01602
15
5
1. A PDP(Plasma Display Panel) comprising a pair of substrates opposed to each other at a prescribed interval, a plurality of address electrodes arranged on one of the substrates, a plurality of sustaining electrodes arranged on the other substrate, the sustaining electrodes intersecting the address electrodes, barriers dividing discharge cells while maintaining the prescribed interval between the substrates, and R(Red), G(Green) and B(Blue) fluorescent layers formed between the barriers in order,

wherein the barriers are arranged parallel to one another between the address electrodes; pairs of the barriers corresponding to two fluorescent layers of the R, G and B fluorescent layers are in the form of a stripe and a pair of the barriers corresponding to the other fluorescent layer include bridges extending in a longitudinal direction of the sustaining electrodes as a discharge cell unit.

20 2. The PDP according to claim 1, wherein the other fluorescent layer is the B fluorescent layer.

B
3. A PDP(Plasma Display Panel) comprising a pair of substrates opposed to each other at a prescribed interval, a

plurality of address electrodes arranged on one of the substrates,
a plurality of sustaining electrodes arranged on the other
substrate, the sustaining electrodes intersecting the address
electrodes, barriers dividing discharge cells while maintaining
5 the prescribed interval between the substrates, and R(Red),
G(Green) and B(Blue) fluorescent layers formed between the
barriers in order,

wherein the barriers are arranged parallel to one another
between the address electrodes; a pair of the barriers
corresponding to one of the R, G and B fluorescent layers are in
the form of a stripe and pairs of the barriers corresponding to
the other two fluorescent layers include bridges extending in a
longitudinal direction of the sustaining electrodes as a
discharge cell unit.

4. The PDP according to claim 3, wherein the two
fluorescent layers are R and B fluorescent layers.

5. A PDP(Plasma Display Panel) comprising a pair of
20 substrates opposed to each other at a prescribed interval, a
plurality of address electrodes arranged on one of the substrates,
a plurality of sustaining electrodes arranged on the other
substrate, the sustaining electrodes intersecting the address
electrodes, barriers dividing discharge cells while maintaining

the prescribed interval between the substrates, and R(Red), G(Green) and B(Blue) fluorescent layers formed between the barriers in order,

wherein the barriers are arranged parallel to one another between the address electrodes; a pair of the barriers corresponding to the G fluorescent layer of the R, G and B fluorescent layers are in the form of a stripe and pairs of the barriers corresponding to the R and B fluorescent layers include bridges extending in a longitudinal direction of the sustaining electrodes as a discharge cell unit, and

a bridge interval in the discharge cell corresponding to the B fluorescent layer is larger than that in the discharge cell corresponding to the R fluorescent layer.

6. The PDP according to one of claims 1 through 5, wherein the bridge is lower than the stripe type barrier.

7. The PDP according to claim 5, wherein an upper surface of the bridge is not coated with the fluorescent layer.

8. A PDP(Plasma Display Panel) comprising a pair of substrates opposed to each other at a prescribed interval, a plurality of address electrodes arranged on one of the substrates, a plurality of sustaining electrodes arranged on the other

209T0"5829400T

substrate, the sustaining electrodes intersecting the address electrodes, barriers dividing discharge cells while maintaining the prescribed interval between the substrates, and R(Red), G(Green) and B(Blue) fluorescent layers formed between the barriers in order,

wherein the barriers are arranged parallel to one another between the address electrodes; a pair of the barriers corresponding to the G fluorescent layer of the R, G and B fluorescent layers are in the form of a stripe and pairs of the barriers corresponding to the R and B fluorescent layers include bridges extending in a longitudinal direction of the sustaining electrodes as a discharge cell unit,

said bridge interval in the discharge cell corresponding to the R fluorescent layer is larger than that in the discharge cell corresponding to the B fluorescent layer, and

said upper surface of the bridge in the discharge cell corresponding to the R and B fluorescent layers is coated with the fluorescent layers.
